Big 5 Personality Framework

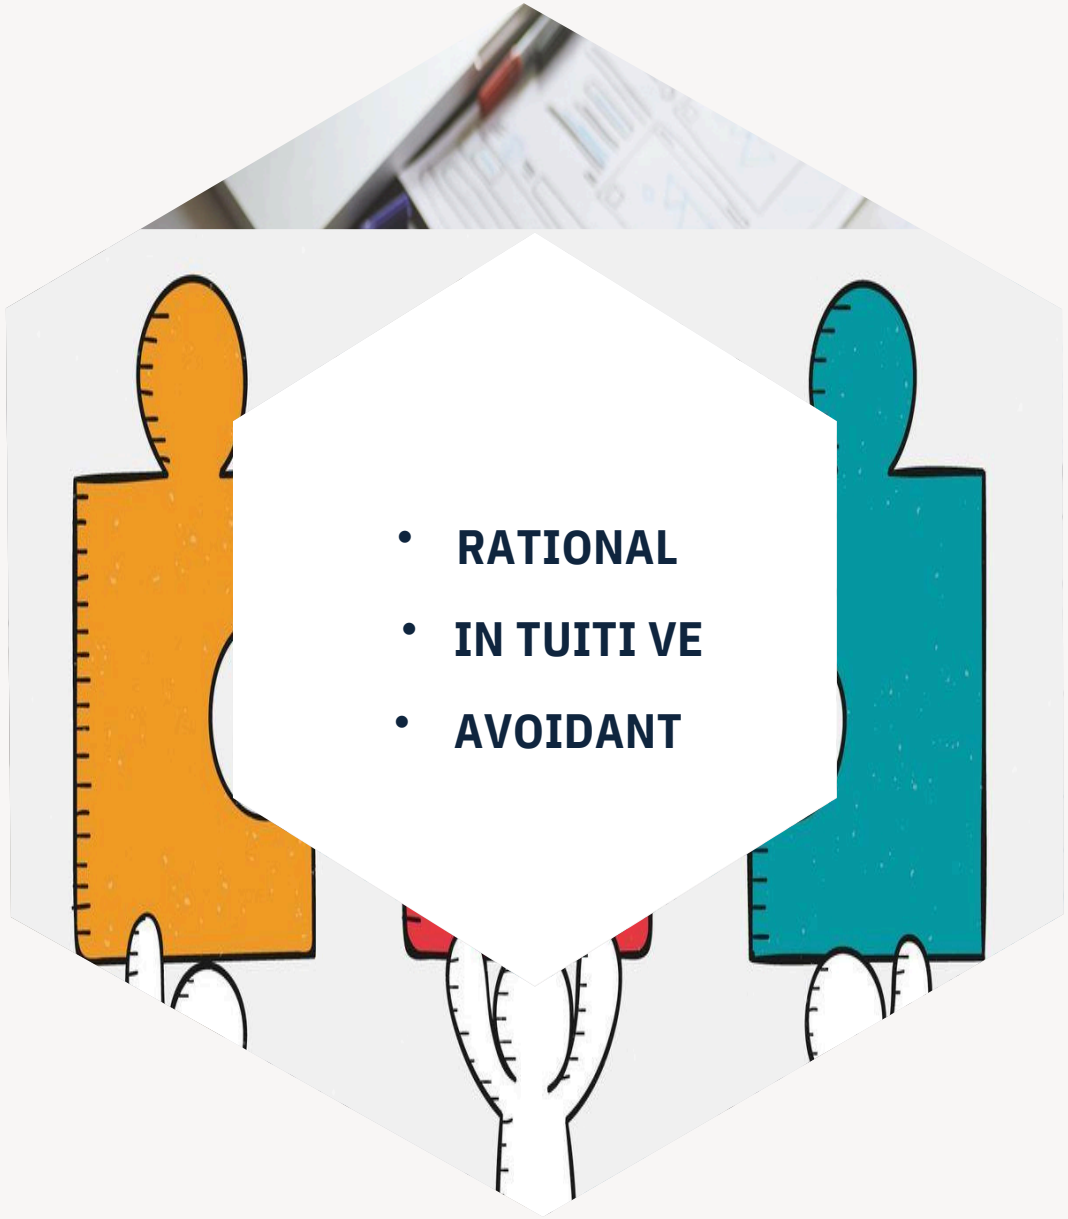

OCEAN Model (The Big Five Personality Traits)

1. Openness to Experience: Curiosity, creativity, and a willingnesstoexplore newideasand trynew experiences.
2.Conscientiousness: Organization, discipline, responsibility, and the ability to plan and work toward goals.
3. Extraversion: Sociability, outgoing behaviour, and energy gained from social interaction.
4. Agreeableness: Cooperation, kindness, empathy, and trust in others.
5. Neuroticism: Emotional instability and a tendency to experience negative emotions such as anxiety, worry, and s tre ss.

Origin: The model was developed by psychologists over several decades, with key contributions from researchers like Ernest Tupes, Raymond Cattell, and later Paul Costa and Robert McCrae, who refined it into its modern five-factor form in the 1980s–1990s.

Use: OCEAN is widely used in psychology, hiring/recruitment, career counseling, and behavioral research to understand and predict how people think, feel, and act across different situations. In this project, it's used to study how personality traits relate to decision-making style.

What Is Decision-Making Style?
Decision-making style refers to the habitual pattern a person uses when making choices, including how they gather information, evaluate options, and commit to a decision.

Origin: The concept draws from decision-making theory in psychology and was notably developed by Scott and Bruce through their General Decision-Making Style (GDMS) model in the 1990s, which categorizes how individuals approach
de ci si ons .
Use: Understanding decision-making styles is useful in fields such as organizational behaviour, career guidance, and personal development. It helps identify whether a person tends to analyse situations logically,rely on intuition,or delay and avoid making
de ci si ons .

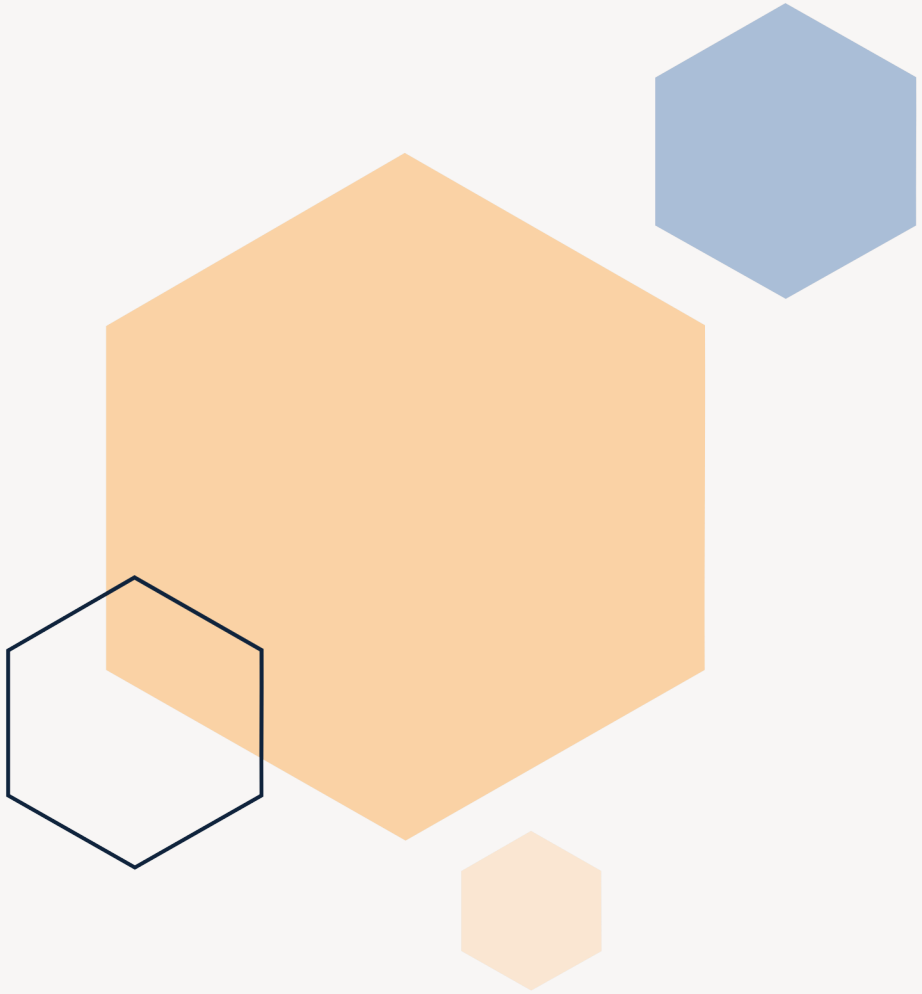

The Three Decision-Making Styles (Used in This Project)
1. Rational: Making decisions through logical analysis, careful evaluation of information, and weighing the pros and cons of available options**.**
2. Intuitive: Making decisions based on gut feelings, instincts, and immediate impressions rather than relying primarily on detailed analysis**.**
3. Avoidant: A tendency to delay, postpone, or avoid making decisions, often due to uncertainty or reluctance to take responsibility for the outcome.

Anova: Single Factor for Rational Decision Making Style

SUMMARY

Groups	*Count*	*Sum*	*Average*	*Variance*
17-19	26	84.5	3.25	1.325
20-22	41	147.5	3.59756098	0.50274
23-25	4	17.5	4.375	0.89583
25-27	5	22.5	4.5	0.25

ANOVA

Source of Variation	*SS*	*df*	*MS*	*F*	*P-value*	*F crit*
Between Groups	9.60406	3	3.20135323	4.04934	0.0102	2.73181
Within Groups	56.9223	72	0.79058689			
Total	66.5263	75				

Anova: Single Factor for Intuitive Decision Making Style

SUMMARY

Groups	*Count*	*Sum*	*Average*	*Variance*
17-19	26	85	3.26923077	0.98462
20-22	41	138	3.36585366	0.9378
23-25	4	15	3.75	0.41667
25-27	5	18	3.6	1.675

ANOVA

Source of Variation	*SS*	*df*	*MS*	*F*	*P-value*	*F crit*
Between Groups	1.10663	3	0.36887693	0.379	0.76842	2.73181
Within Groups	70.0776	72	0.97329972			
Total	71.1842	75				

Anova: Single Factor for Avoidant Decision Making Style

Decision Style	F-value (Variation)	P-value (Probability/Chance)	Significant
Rational	4.05	0.0102	Yes
Intuitive	0.379	0.768	No
Avoidant	0.786	0.505	No

Conclusion :

1) Rational: Significant (p = 0.0102) -> scores rise with age
2) Intuitive: Not significant (p = 0.768) -> flat across age groups
3) Avoidant: Not significant (p = 0.505) -> flat across age groups

Overall: Age significantly affects only rational decision-making, not intuitive or avoidant.

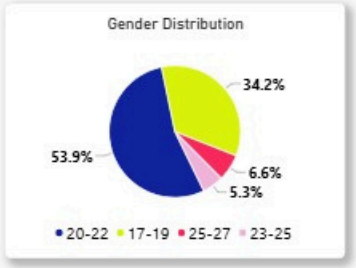

Interactive Dashboard on Personality vs Decision Making Style

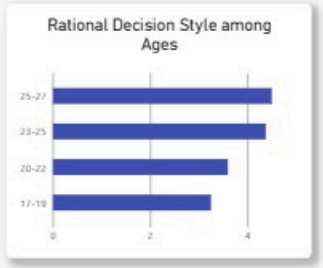

Aim: To examine the relationship between personality (OCEAN) and decision-making style (Rational, Intuitive, Avoidant) among individuals aged 17-27, and test for differences by gender and age group.
Sample: N = 76 | Tools: Pearson Correlation, Independent T-Test, One-Way ANOVA

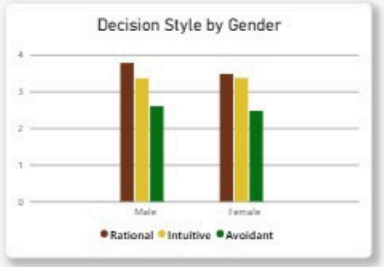

Total Respondents	Avg Rational Decision Style Score	Avg Intuitive Decision Style Score	Avg Avoidant Decision Style Score
76	3.58	3.37	2.51

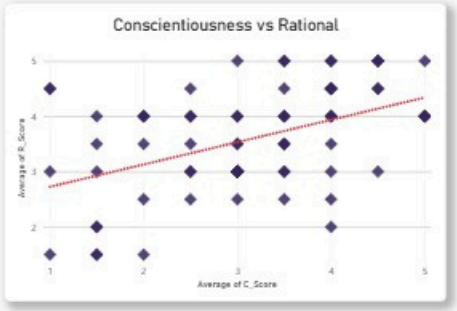

Gender
- ☐ Female
- ☐ Male

Stream
- ☐ Employeed
- ☐ FY
- ☐ JC
- ☐ MCA
- ☐ MSc
- ☐ SY
- ☐ TY

Personality Traits (OCEAN)	Rational Decision Style	Intuitive Decision Style	Avoidant Decision Style
Conscientiousness	0.46	0.21	-0.16
Openness	0.34	0.07	-0.16
Agreeableness	0.15	0.10	0.30
Extraversion	0.08	0.04	0.23
Neuroticism	0.06	0.18	-0.02

Key Findings
- Conscientiousness significantly predicts Rational decision-making (r = 0.46)
- Age significantly affects Rational decision-making only (p = 0.0102) - not Intuitive or Avoidant
- Gender shows no significant effect on any decision-making style (all p > 0.05)

Dashboard | OCEAN | Decision Style | +

Key Findings

Sample N = 76 | Pearson correlation, independent t-test, one-way ANOVA

Conscientiousness → Rational

r = 0.46 (moderate)

Organised, disciplined people tend to decide through logical analysis. Hypothesis supported.

Neuroticism ↛ Avoidant

r = −0.02 (negligible)

Anxious people did not avoid decisions more. Hypothesis not supported.

Age affects only Rational

p = 0.0102 (significant)

Rational scores rise from 3.25 (17–19) to 4.50 (25–27). Intuitive and Avoidant stay flat.

Gender has no effect

all p > 0.05

Males and females did not differ on Rational, Intuitive or Avoidant styles.

Thank you
